

# Annapurna Kumari

## Education

+91 9572322828   [Annpurnakumari2828@gmail.com](mailto:Annpurnakumari2828@gmail.com)   [GitHub](#)

**Indian Institute of Information Technology, Jabalpur**

**2021 - 2025**

*B.Tech in Computer Science & Engineering*

*8.67/10 CGPA*

## Work Experience

**Software Development Intern (Back-End) - Veridia.io**

**Sept 2024 - Oct 2024**

- Engineered and launched **RESTful APIs** using **Python (Flask)**, accelerating backend data handling and improving processing efficiency by **30%**
- Revamped **MySQL database design** and query logic, cutting response time by **25%** and boosting scalability
- Partnered with a team of 3+ developers to **integrate Flask APIs** with client-facing interfaces, ensuring uninterrupted data synchronisation and seamless user interaction
- Strengthened backend system stability by conducting **unit testing, debugging**, and implementing performance tuning measures

## Achievements

- Selected for **Amazon Machine Learning Summer School 2025**: Chosen among the top **1%** nationwide for a 3-week intensive ML training program by **Amazon**, covering deep learning and model evaluation using Python
- Solved 500+ LeetCode problems, ranked in the **top 20% globally** for algorithmic mastery (**LeetCode**)
- Achieved **Specialist (1475)** on Codeforces, ranked top 30% in India via regular rated contests (**CodeForces**)
- Attained **3-star (1456)** rating on CodeChef through consistent participation in monthly contests (**CodeChef**)
- Served as a **Teaching Assistant** for the course **Digital Logic and Design (DLD)**

## Projects

**Annapurna Devfolio — Personal Portfolio**

[Link](#)

- Built a responsive HTML, CSS, and JavaScript portfolio with typed hero roles, light/dark theme, services, filtered project cards, skill bars, and a contact flow
- Implemented a particle field, cursor spotlight, and scroll-reveal motion while keeping the site zero-build and deployable on GitHub Pages
- Added a printable CV and mailto contact form so recruiters can review work and reach out without a backend
- Shipped as the public homepage for 5 live product demos, with pinned GitHub repos and a profile README linking to each app

**Orbit Kanban — Drag-and-Drop Task Board**

[Link](#)

- Developed a 4-column kanban board (Backlog, In Progress, Review, Done) using the native HTML Drag and Drop API and vanilla JavaScript
- Added create/edit/delete cards, High / Medium / Low priority tags, and keyboard shortcuts (N to create, Esc to close) for faster task management
- Persisted board state in localStorage, eliminating login or a server while keeping data available across reloads
- Designed a glassmorphism UI with staggered card animations and empty-column drop targets to make workflow status immediately scannable

**Lumen Journal — Markdown Notes with Live Preview**

[Live](#)

[Link](#)

- Built a split-pane markdown editor with sidebar search, create/rename/delete, and a custom parser for headings, lists, code, links, and quotes
- Rendered a live preview as the user types so notes stay readable without a build step or third-party editor
- Stored all notes locally in the browser, enabling 100% offline use after the first load
- Delivered a mobile layout with preview toggle so the same journal works on small screens without losing the writing flow

## Technical Skills

**Languages:** Python, C, C++, JavaScript, TypeScript

**Frameworks:** React.js, Node.js, Next.js, Express

**Databases:** MySQL, PostgreSQL, MongoDB

**Backend:** Flask, RESTful APIs, JWT Authentication, Clerk

**Developer Tools:** Git, GitHub, Postman, AWS

**Machine Learning & Data Science:** Scikit-learn, Pandas, NumPy, EDA, Model Evaluation, Regression

**CS Fundamentals:** Data Structures & Algorithms, OOP, Operating Systems, DBMS, Computer Networks
